

Electrical High Voltage Engineer

- 📍 BASF Antwerp, Belgium
- 📄 Open-ended contract
- 🕒 Full-time

At BASF Antwerp, we are working on the future. For example, we will switch completely to green electricity from 2023 and we want to be the first climate-neutral chemical site. Would you like to work on a sustainable future in a warm team? Then perhaps you could flourish with us as an Electrical High Voltage Engineer!

MEET US: at our booth

Your role

As an Electrical High Voltage engineer, you are responsible for the management and operation of the high-voltage grids and installations at BASF Antwerp.

- You are responsible for operation, optimisation and maintenance of these installations, guaranteeing the highest possible availability for all customers.
- You are responsible for the further development of the electrical assets. As a member of the power distribution team, you provide input for the future development of high-voltage networks and the associated investment planning.
- You implement and further develop our infrastructure strategy for high-voltage grids and installations.
- You will also contribute to the further development and integration of the software tools required for this purpose.

Our match

- You have an academic master in Energy Technology with a strong interest in High Voltage electricity.
- You work methodically and have good organizational skills and a drive for efficiency.
- You are a team player with strong communication and social skills.
- You are result-oriented, down-to-earth and critical and bring your ideas across with conviction. You are always safety-conscious.
- A good foundation in mathematics is a real plus.
- You are fluent in English and are interested in learning Dutch, via an in house-training.

We offer you

- A challenging and constantly evolving job.
- A warm welcome during our reception days and guidance by a BASF buddy.

- A nice working atmosphere in a large and stable company on a human scale
- A growing salary package with numerous options (time/money, lease bicycle, ...), a bonus, a fixed net remuneration, various fringe benefits (including a lease car) and several social provisions like a pension plan, hospitalization insurance for you and your family, discounts in multiple stores, etc.
- A good work-life balance! You will have flexible working hours and 38 vacation days. Occasional homeworking is possible as well.
- A well-filled stomach due to our extensive offer in the company restaurant, monthly fruit distribution and meal vouchers.
- Alternative ways to get to the site (free bus transport, lease car, bicycle lease plan).
- Opportunities for self-development through a wide range of training courses and an internal job market.

About Us

We are BASF Antwerp NV, the second largest production site of the BASF group, and the largest chemical company in Belgium.

We are globally number one in chemistry through our intelligent solutions for our customers as well as for a sustainable future. Our more than 3,000 colleagues form a diverse team and specialise in production, logistics, engineering, lab, energy management but also safety, environment, communication and so on. Our diversity makes us stronger! We also create careers at BASF, so there is a wide range of opportunities, in Belgium and internationally.

Become part of the best team!
