

Software Development Engineer – Backend (m/w/d)

Overview

Working from home at the moment? LogMeIn supports the remote work lifestyle for more than 20 years. Now millions of users worldwide rely on our products more than ever. We believe that the future is to work from everywhere. Join our international team and help to build our real-time communication clients. Support the GoTo product family with apps like GoToMeeting, GoToWebinar or GoToConnect to run in every browser and on every operating system.

The Realtime Communication Cloud team in Dresden, Germany is looking for highly motivated, experienced and passionate software engineers. Constant learning and delivery of results are the core characteristics of the person we're looking to hire. Dedication to software craftsmanship and a commitment to open and honest feedback complement these characteristics. We build our software on TypeScript, node.js, AWS services (EC2, EKS, S3, Lambda, ...), Docker, Git and use Jenkins as our CI tool of choice.

This position is an on-site in Dresden, Germany.

About LogMeIn

LogMeIn builds technology to secure and simplify how people and businesses do their best work, whenever, however, and most importantly, wherever. A market leader in unified communications and collaboration with products like GoToMeeting and GoToWebinar, identity and access management with LastPass, and customer engagement and support solutions with products like Bold360 and RescueAssist, LogMeIn has millions of customers spanning virtually every country across the globe.

Responsibilities

- You'll take part in all phases of software development: From architecture and design to development and testing in an agile team.
- We own the full stack from backend up to the web apps, you build new features in close collaboration with all involved teams.
- You expand our real-time platform from Chromium based browser to support Firefox and Safari
- You become an expert in WebRTC support for one specific browser
